A positioning mechanism (17, the position mechanism will be operated by the tester 17) for positioning guide needle (23) above a fault location of a semiconductor device (10);

A solution supply device (19) for supplying a solution containing a coloring agent and a volatile solvent (column 2 line 21 – 26 and column 2 line 70 –73) to the fault location until it touches a tip of guide needle; and

A heating unit ( the use of heat to dry volatile solvent is disclosed in the background of the invention in column 2) for evaporating the volatile solvent to form a mark consisting of the coloring agent surrounding the fault location (as seen in figs 6 and 7).
